PROFESSIONAL SUMMARY

Computer Engineering student with strong interest in software development and artificial intelligence. Experienced in building academic projects including AI-based systems and web apps. Skilled in Python, JavaScript, MERN Stack, Git, and GitHub, with basic knowledge of IoT technologies, and passionate about solving real-world problems through technology while continuously improving technical and problem-solving skills.

WORK EXPERIENCE

Event Team Volunteer

Feb 2026 – Present

ISTE, Anand

- Assisted in organizing and managing technical events and student activities.
- Coordinated with team members to ensure smooth event execution.
- Built using modern web technologies during college events.

PROJECTS

AI Based Interview Simulator

- Built an AI-powered platform that simulates interview questions and helps users practice technical interviews.

Smart Car Health Monitoring System

- Developed a system that monitors critical car parameters such as engine temperature, oil level, and battery health using sensors and a microcontroller.
- Enabled real-time health monitoring and alerts via a mobile app.

Bridge Health Monitoring System

- Designed a monitoring system for detecting and reporting structural health of bridges using vibration and tilt sensors.
- Implemented a wireless system using Arduino and ESP8266 to remotely monitor bridge conditions and alert for maintenance needs.

SKILLS

Technical Skills

- Python
- JavaScript
- MERN Stack
- Git
- GitHub
- IoT (Basic)

Soft Skills

- Teamwork
- Problem Solving
- Communication
- Adaptability

EDUCATION

B.Tech – Computer Engineering

Madhuben and Bhanubhai Patel Institute of Technology, Anand

Expected Graduation: June 2027
